a) It increases project costs
b) It creates a conflict of interest
c) It violates copyright laws
d) It slows down decision-making

15. According to the ACM Code of Ethics, what should a computing professional do if they discover a security flaw in a system?
a) Ignore it if fixing it delays the project
b) Report it and advocate for a solution before release
c) Sell the information to cybersecurity firms
d) Only inform colleagues informally

16. What are the primary characteristics of a professional?
a) Expertise, autonomy, and financial success
b) Expertise, responsibility, and integrity
c) Financial success, leadership, and teamwork
d) Responsibility, leadership, and autonomy

17. Which of the following is not typically covered by professional codes of ethics?
a) Integrity in decision-making
b) Confidentiality of client information
c) Personal financial investments
d) Competence in professional practice

18. Government licensing for professionals primarily aims to:
a) Ensure professionals adhere to ethical guidelines
b) Restrict the number of professionals in a field
c) Ensure professionals have a minimum level of competence

19. A key characteristic of successful IT professionals is:
    a) Accepting outdated technologies without seeking improvement
    b) A strong desire to stay up-to-date with the evolving IT landscape
    c) Prioritizing personal comfort over system security
    d) Dislike clear communication with users
20. Freedom from surveillance is?
    a) Being tracked
    b) No one watch you
    c) Followed
    d) All of the above
21. Which ethical principle emphasizes treating others with fairness and impartiality?
    a) Integrity
    b) Respect for Persons
    c) Justice
    d) Beneficence
22. You're a software engineer working on a project for a large tech company. Your manager asks you to manipulate data to make the company's product appear more favorable in comparison to its competitors. You know that this manipulation is unethical and goes against the IEEE and ACM codes of ethics. What should you do?
    a) Follow your manager's instructions to avoid conflict and keep your job.
    b) Politely refuse to manipulate the data and explain why it goes against professional ethics.
    c) Manipulate the data as requested, but anonymously report the unethical behavior to higher authorities.
    d) Manipulate the data as requested, but document the unethical request and keep it as evidence for future reference.
23. Which of the following is not a way of protection?
    a) Protection
    b) Privacy
    c) Piracy
    d) Password

    a) The supervisor's behavior
    b) Organizational culture
    c) Code of ethics
    d) All of the above
25. Without _____, there is no concept of rights, evaluation and professional malpractice
    a) Licensing
    b) Certification
    c) Self-assessment
    d) All of these
26. As a software engineer, you should be striving for?
    a) Highly paid jobs
    b) Job security
    c) Delivering high quality products
    d) Making your boss as happier with you as possible

Subjective Part

Question 2: Answer the following short questions. (3+3 = 6 marks)

a) "Honest, upright, law-abiding citizens have nothing to fear from the distribution of their personal data." Do you agree or not? Give at least two reasons for your position and one reasonable objection to it.

b) Differentiate between Bribery and gift and give an example (at least ONE) related to IT industry.

Question 3: Answer these scenario-based questions. (6 x 3 = 18 marks)

a) **Scenario:** Suppose two students, (Angloo and Bangloo) are doing a research project together. Between the two Angloo is the most punctual, hardworking student and does all the project work on time and completes it. Upon completion of the project he prepares a document containing all the information related to that project. Now on submitting the document he finds out that Bangloo has already submitted the same document before him with a different name and claims that he himself has made it. Which type of fraud does Angloo has to face from Bangloo in this regard? Justify your answer with solid reason.

b) **Scenario:** You are a developer working on a mobile health app that tracks users' fitness activity. The app also collects background data like GPS location, sleep patterns, and microphone input for "future features," though these functions are not mentioned clearly in the privacy policy. This data is silently stored on company servers and is not currently shared externally, but may be used later for partnerships and marketing strategies. Most users are unaware that this level of data collection is happening. Now according to the ACM Code of Ethics, what are the ethical issues involved in this situation? Is this form of invisible data collection acceptable? Why or why not? What should you do as a professional?

c) **Scenario:** You are working as a freelance software engineer and are hired by a startup to develop a prototype for a medical data analytics platform. After a few weeks, you are also approached by another healthcare company working on a similar product, offering a significantly higher fee. Both projects involve similar technologies and potentially overlapping user data. While you have not signed an exclusivity agreement, you realize that continuing both jobs may lead to conflicting interests and potential data privacy concerns. As an IEEE member, how should you proceed in this situation? Which specific ethical responsibilities apply, and what actions would be considered ethically appropriate?
