-: QUESTION No. 1 :-

: CODE OF ETHICS VS. CODE OF CONDUCT:

Ans: The fundamental distinction in their purpose & focus:
A **Code of Ethics** centers on broad moral values and principles for a profession, while a **Code of Conduct** details specific, mandatory rules for an organization.

◆ Key Difference :-

<u>Code of Ethics</u>	<u>Code of Conduct</u>
• <u>Primary Focus:</u> Principles & core values essential to an occupational group.	Specific rules & procedures defining a work relationship in a company policy.
• <u>Nature:</u> Standards of behaviour expected of an individual by a profession.	Rules that specify appropriate and acceptable behaviour (the Do's and Don'ts).
• <u>Goal:</u> To resolve moral judgements and serve as a guideline for ethical decision-making.	To manage the relationship, covering responsibilities, dress code, and use of company resources.

◆ Examples:-

- **Code of Ethics:** The obligation of computer professionals to respect the privacy of others and preserve data integrity against unauthorized access,

Date:

which is a fundamental moral imperative.

- **Code of Conduct:** A company's policy against software piracy (illegal copying software) that an IT worker must enforce to protect the employer's property right.

◆ SIGNIFICANT FEATURES OF A GOOD CODE OF ETHICS:

A strong Code of Ethics is a guiding document that promotes high standards and moral action within a profession. Its significant features include:

- **Aspirational & Foundational:** It clearly states the principles and core values that are essential to the occupational group, outlining what the organization aspires to become.
- **Guides ~~Standards~~ & Decision-Making:** It offers an aid to individual decision-making, providing guidelines for ethical judgement, especially in "grey areas" and helping to resolve moral issues.
- **Promotes Standards & Competence:** It establishes and promotes high standards of practice and is linked to a commitment to continuing education of practitioners.

Date:

- Builds Trust & Respect: The code contributes to improving trust and respect from the general public and defines standards for external relations with clients and employers.
- Serves as a Benchmark: It functions as an evaluation benchmark that professionals can use for self-assessment against high ethical standards.
- Enforceability: It includes rules and ~~principles~~ ^{principles} that professionals are expected to abide by, promotes taking responsibility for errors, and treats violations as inconsistent with membership.

Question # 02

Code of ethics for a medical doctor:

The code of ethics for a medical doctor focuses on four main principles. Care, honesty, excellence and fairness. These principles guide a doctor's behaviour and ensure that they serve patient and society in a responsible and ethical way.

Care :-

Care means the doctor has a duty to protect the well-being of everyone they deal with, especially patients. The doctor must use their time and effort to keep people safe, support them and act responsibly in all situations.

DATE.....

Honesty:-

Honesty requires the doctor to speak always truthfully, especially when giving medical information to patients. By being honest the doctor builds trust with patients and ensures clear communications.

Excellence:-

Excellence means the doctor must always aim to provide high-quality medical services. They should maintain high standards, improve their skills and apply excellence.

Fairness:-

Fairness means treating every person equally without bias or discrimination. The doctor should consider people's personal situation before forming judgments and must treat all patients with respect and equality.

Kamran Products

QUESTION 3

PART-A:-

Is Rachel's way an ethical way to conduct business?

- Keeping in mind the rules of ethics, it is not an ethical way, & this way of conducting business is not acceptable.
- If Looking at a positive point of Rachel, She refuses to ship the product when there is any possibility of physical harm, but on the other hand she is willing to ship a product that has a higher chance of failure resulting in data loss of customers. That is a negative point, now she is doing this just because if she doesn't their competitor will ship it, which means she is ignoring the ethical rules just because of competition in sales.
 - Now this ignorance conflicts with two major ethical rules by "IEEE".
- To hold paramount the safety, health & welfare of the public, and to disclose promptly factors that might endanger the public or environment

→ "to be honest & realistic in stating claims or estimates based on available data."

- Now because she is prioritising market timing-competition over customer welfare, she fails the professional ethical standard required of engineers.

→ So keeping the IEEE code she is not being honest & ethical.

PART-B:-

How should she know or determine when to ship a product with known defects?

→ Now if Rachel follows a clear, principled decision-process guided by IEEE code of ethics.

→ Identify the defect and risk:-

- She needs to determine: what is the defect? what kind of failure might occur and what is the chance of the failure to occur. After that she should also know the consequences if fails.

- All of this should be documented.

→ Decide if the risk is acceptable:-

- If the defects could cause a physical harm then she must not ship, which is according to the IEEE code about holding public safety paramount.

• If the defect is causing other harm ^{instead of} physical, then she should make sure the following.

- ▷ Is the Probability of failure Low enough.
- ▷ Is the impact small enough.
- ▷ Are the Safeguards in place to reduce the risk.
- ▷ She must check wheather the customer & distributor are informed of the complete scenario.

• Now her decision must be based on technical & ethical codes but not competition in sales.

→ Reduce the risk and disclose:-

- Now if the risk is acceptable and she decides to ship, now keeping in mind the ethical code she should place the safety measures like backup options & clear warnings to customers.
- Following the IEEE code of ethics Rachel must honestly disclose to her management & also to the customers & distributors, the known defect & the risk.
- All of this should be documented in a proper & ethical way.
- Her honesty here corresponds with IEEE code & "be honest and realistic".

→ Set clear criteria:-

- Rachel along with her team should define the minimum acceptable risk levels.

- This ensures the decision isn't driven solely by market timing, but by professional standards.

→ **DELAY Shipment:-**

- If after assessment the defects risk is un-acceptably high, then she should delay the shipments until the risks comes low.
- Again every thing should be clearly documented for further issues.
